

BP Settling Tube

Brand: OFI Testing Equipment, Inc.

Product Code: 122-086

Availability: Call for availability

Lead Time: 45

Description

The BP Settling Tube is used to test the settling characteristics of a well cement. The cement slurry is poured into the tube and then cured in a Consistometer or water bath. After the cement has cured, the column is then cut into pieces and the density of each piece is measured using Archimedes Principle.

Features

- Tests the settling characteristics of a well cement
- Includes brass tube, top and bottom cap, and two hose clamps
- Size: 8.5" Tall x 2" Diameter (23 x 5 cm)
- Weight: 1.5 lb (.68 kg)

Part Number

- #122-086
